

BRAKE RESISTOR REPAIR AND MAINTENANCE SERVICES

A trusted partner to the railway industry, eTrac provides effective maintenance solutions to ensure optimal performance and reliability of brake resistors.

With over 15 years of experience, eTrac is a proven partner for train operators, OEMs, and maintenance providers. We specialise in comprehensive brake resistor repair and preventative servicing for the UK rail industry. Our technicians bring precision and experience to every repair.

The benefits of using eTrac for brake resistor repair

- **Fast turnaround** - Work is typically completed within 2-3 weeks with a rapid response service option provided for emergency repairs.
- **Comprehensive fault detection** - We thoroughly clean, inspect and test every component, including insulators, cables and clamps. Complete removal of dust deposits increases life and allows detailed inspection and fault identification.
- **Prevent further damage** - On-site repairs might miss signs of future failures. We catch them early.
- **Extend asset lifespan** - Our process leverages the opportunity for preventive maintenance, enhancing brake resistor reliability and lifespan.
- **Resource flexibility** – Avoid staff or stock limitations; we handle the process for you.
- **A one-stop solution** - Send the entire unit to us, and we'll take care of everything, from panel repair requirements to fan overhauls and mesh replacements.

Contact us to discuss your requirements.

A comprehensive inspection and repair process

By following robust and well-defined processes, we ensure that every repaired unit meets or exceeds industry standards.

We begin with chemical cleaning of all brake resistor components. This meticulous level of cleaning allows a thorough inspection to be undertaken, identifying potential issues which are detailed to the customer with options for repair.

Before and After Results

From heavily worn to fully restored - every detail checked, cleaned, and rebuilt.
